I am a student in iitm online degree currently in a diploma course.

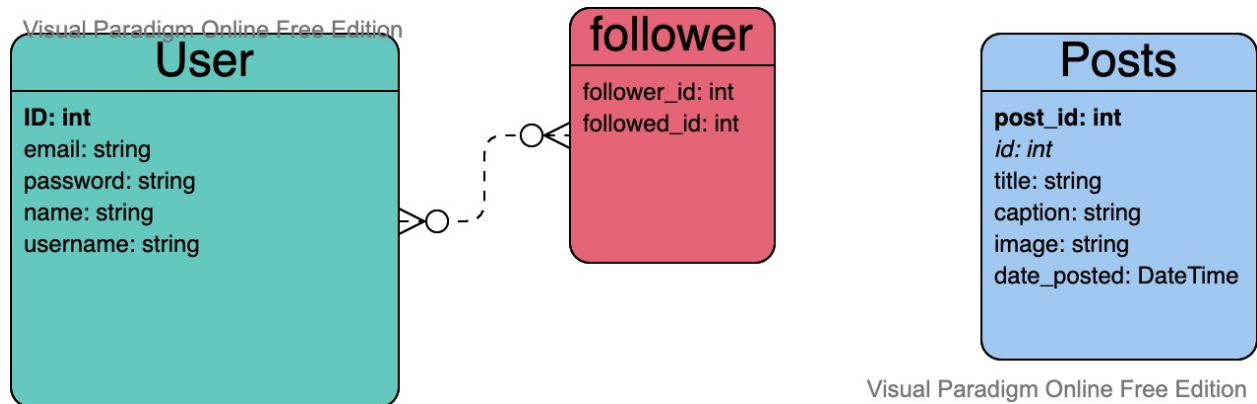

Description

In this project we have to make a multi user blog app used to upload blog with images. Each user should be able to upload multiple post and should be able to follow and unfollow other users.

Technologies used

In this project we have used flask for making app and jinja 2 and bootstrap for styling. Sqlite is used for making database. Extensions used in this project are login_user,render_template,redirect,request,session, SQLAlchemy etc .

DB Schema Design

In this project we have made 3 table User, follower and posts. Table User and follower are in many to many relationship with each other.

Architecture and Features

In this project app is made inside project folder which has app.py file,template folder and static file for saving image and database file.

This app has a login system made on flask_login , each user can follow and unfollow other users and the posts of users which we follow are shown on user feed
